

monitor 19.10 SpiderLift

19.10 Spider Lift

The vertical lift path of this knuckle-boom model affords an unrestricted 200kg envelope with excellent up-and-over reach.

The huge amount of travel in the stabilizer legs allows you to set up on very uneven ground. Narrow width set up is also possible.

The radio control drive option allows for extra safety when driving in difficult areas.

Total package weight with heavy duty steel trailer: 4490kg

The compact dimensions are what gives spiderlifts the edge in confined locations.
